Career Opportunity

_____

SOFTWARE ENGINEER Node Js/React Js

We are looking for an experienced, passionate, and motivated React Native/JS engineer who will help develop Swan applications and products.

Main Duties will include:

- Development of our mobile applications, from architecture, to coding, to release
- Build mobile applications using React Native/Js
- Ownership in developing and improving all aspects of our stack (development, testing, CI, automation, and architecture)
- Deploy to both iOS and Android (Apple App Store, Google Play Store)
- App layout and user interface development
- Designing and engineering features that deliver value to the people who use them.
- Deployment on AWS
- Develop NodeJS backend API for App and uploading of documents on Amazon S3
- Design database architecture using SQL and Mongo/dynamo db

Qualifications and Experience:

The ideal candidate should possess the following profile:

- Have developed React Native/Js apps that communicate with Restful APIs, use local storage, network data synchronization, and user authentication.
- Have a working knowledge of the Expo platform for React Native
- Enjoy working with React Native and have a successful track record of developing both iOS and Android applications using this framework
- Have integrated with native hardware components in a React Native app
- Understand and have experience making decisions about mobile application architecture, including data modeling, networking and data synchronization, and concurrency
- Competent in developing application interfaces for multiple device types based on mockups
- Strive to automate everything - from sending out builds to running tests
- Be comfortable working with HTTP-based web services, and have a working knowledge of web application and API architectures
- Communicate well with others in both written and verbal forms
- Be self-directed and able to manage time effectively
- Knowledge of XCode or Android Studio
- Have previous history of working with a remote, distributed team
- Work with tools including Jira, GitHub, Google Docs, etc
- Have a good knowledge of AWS deployment and S3

If you feel challenged by the above position, and believe you have the required profile, please send your application letter and a full Curriculum Vitae quoting "Software Engineer- Node JS/React JS"
in the subject line to:
